

Accessories Coupler 8-7mm Reducing St

Description

Hexatronic's straight reducing microduct connectors incorporate high quality push fittings, designed to offer the highest of performance for blown optical fibre installations.

Used in conjunction with our microducts in a range of industry standards sizes, incorporating a clear PC polycarbonate main body.

These offer a high transparency window are impact resistant and offer durability.

Features

- Clear, transparent body
- Rugged design for direct buried and above ground use.

Application

The Hexatronic reducers are used within the network where we need to change between various sizes of microducts being used.

The most common area of the network these reducers can be found is around enclosures where large quantities of smaller microduct connects to larger distribution microducts
