

FOR IMMEDIATE RELEASE

Arrow by Altman Solon to Integrate Hexatronic US Fiber Optic Architecture into Network Planning Software

February 25, 2025 – Altman Solon, the world’s leading strategy consulting firm for the telecommunications, media, and technology industries, announces that its network planning software, **Arrow by Altman Solon**, will integrate **Hexatronic US’s** advanced fiber optic architecture into its platform. The advancement integrates the micro-duct model into Arrow’s financial optimizing planning capabilities with Hexatronic US’s scalable and capex reducing FTTX solutions, enabling service providers to optimize fiber deployments rapidly.

By incorporating Hexatronic US’s innovative fiber optic infrastructure into **Arrow**, network operators will gain powerful insights into the design, financial analysis, and optimization of **FTTH** and fiber network deployments. The partnership ensures that service providers can maximize **cost savings, speed of deployment, and scalability** while leveraging Hexatronic US’s field-proven solutions.

"This collaboration with Hexatronic US combines their fiber architecture and Arrow by Altman Solon’s automation capabilities, allowing operators to streamline network planning and deployment decisions," said **Ben Yemini, Associate Partner, Arrow** at Altman Solon.

"By integrating our architecture into Arrow, we are equipping service providers with the best tools to plan, design, and build next-generation fiber networks," added **Chad Johnston, Vice President** of Strategy at Hexatronic US.

The integration will be available in **the first half of 2025**, providing North American **network operators, ISPs, and infrastructure investors** with enhanced tools to drive fiber expansion and bridge the digital divide. Over the past decade, Arrow by Atman Solon has helped dozens of global fiber providers create plans covering over 100 million new end points and plan over \$5 billion dollars of expansion builds.
