

Viper Ease

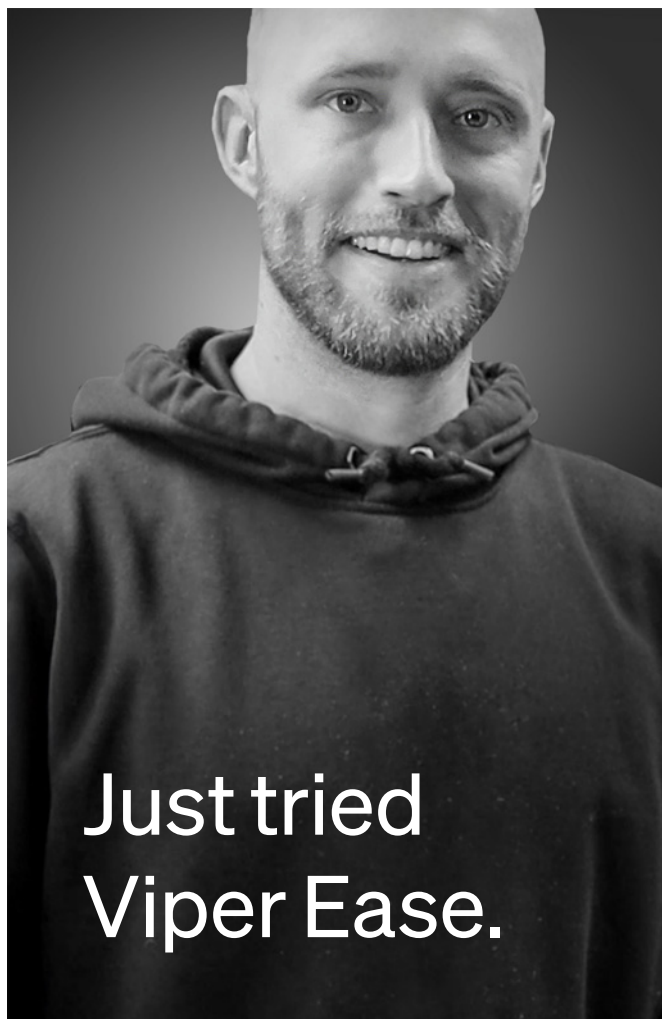

VIPER™

exatronic

New
record?

Just tried
Viper Ease.

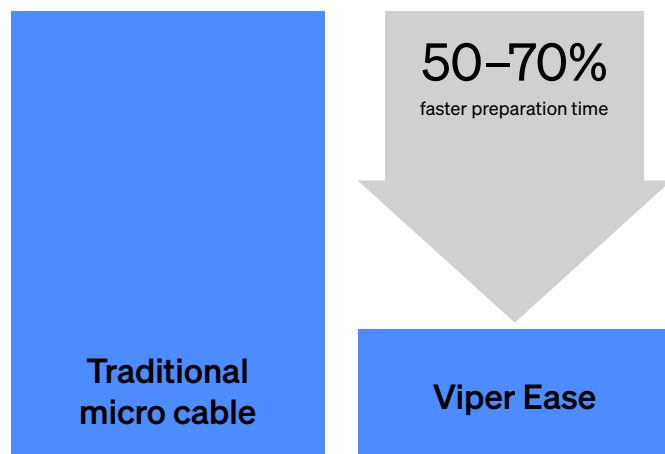

We heard you. Technicians in the field asked for a smoother, faster installation experience that saves time and money — and we delivered. Viper Ease is the next generation of our class-leading Viper micro cable series, which is designed to make every step of the job easier.

High performance, less complexity

Our Viper Ease time study shows that you need up to 70% less time for preparation when splicing compared to regular micro cables. The improved handling makes Viper Ease perfect for mid-span, and the higher the fiber count, the more time you can save. Viper Ease is available with 12-288 fibers.

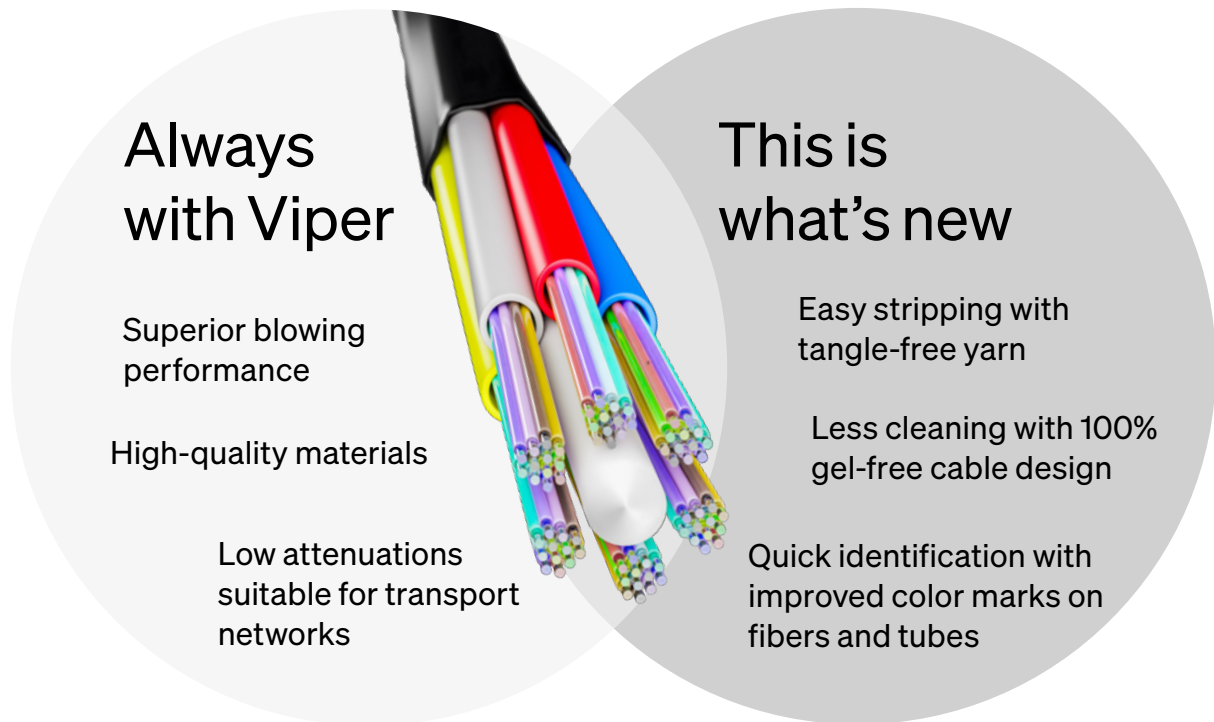

Easy-to-use products also ensure project timelines and correct installations for future-proof networks. With Viper Ease, you get all the benefits from our Viper series, including extra perks to be amazed by in the field.

Get the job done faster with Viper Ease

Why new Viper Ease is so fast to install

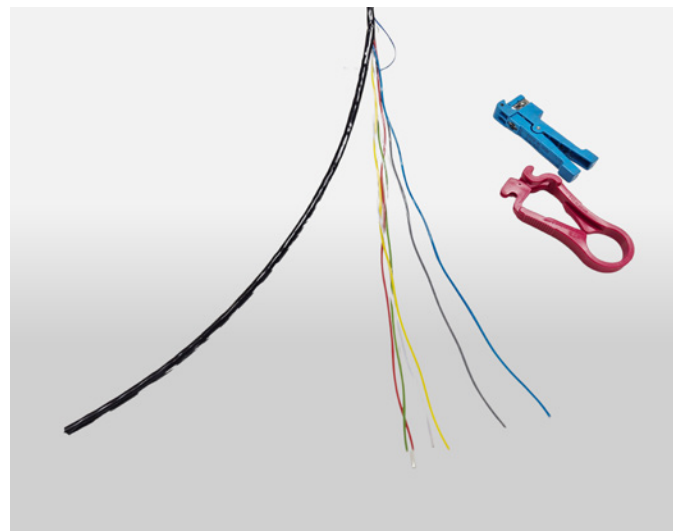

It all comes down to a unique product design. When turning the installers' wishlists into a new-generation micro cable, the development team found the little tweaks that made a big difference. For Viper Ease, simplicity is key.

Fewer steps, less tools

Reducing the steps in the preparation process not only speeds up the project, it also minimizes the amount of tools you'll need in the field.

- **Binding yarns out of your way** – no need to spend time untangling
- **100% gel-free** – no sticky gel removal with harmful chemicals, and you can skip the gloves
- **Super clear colors** – Identify fiber tubes instantly!

Ready to break a record?

Then we suggest you try Viper Ease right away. Installing micro cables has never been faster. Contact our team to learn more!
