

Automatic Preparation Machine APM-101/102

The APM-101 achieves high speed and reliable performance in the preparation of optical fibre before splicing. Reducing fibre breakage plus the possibility of low quality cleaving results, the APM-101 automatically performs coating stripping, cleaning and cleaving of the optical fibre to improve and streamline operation times.

Funktioner

- Automatic Stripping/Cleaning/Cleaving Operation
- 125um Cladding/250um Coating
- Approx 23 Seconds Operation Times
- 3-10mm Cleave Length
- FH-100 Holders – APM-101
- FH-70 Holders – APM-102
