

Bracket 32

Designed to attach a dropwire clamp at end users' premises

Features

- Galvanised steel bracket with extended eye
- Designed to negotiate the overhang of the roof
- Enables communication lines to be routed from the pole down to the building via the bracket

Design

A dropwire fixing consisting of a galvanised steel "J" shaped Bracket with a welded loop and a plate with four holes at the other end. Designed to attach a dropwire clamp to timber or brickwork at end users' premises where additional height clearance is required

Product Information

Fixing Holes: 8mm
