

Duct Integrity Test Kit

Designed to offer a full solution for testing your microduct integrity

Features

- The Hexatronic Duct integrity kit has all the components required to test microducts ranging from 3mm up to 8mm in diameter.

Application

All microducts from Hexatronic are 100% tested for Quality and dimensional compliance during manufacture. However, the Microduct quality and integrity can be compromised during Delivery, Storage and Deployment. To minimise costs through failed cable deployments and duct excavations post-deployment it is recommended that all ducts are immediately tested after deployment. The Hexatronic Duct integrity kit has all the components required to test microducts ranging from 3mm up to 8mm in diameter.

Design

The Duct Integrity Kit from Hexatronic has been designed to offer a full solution for testing your microduct integrity. The kit contains the full range of couplers, microducts, darts, sponges and accessories required to test the access network. With the addition of a compressor, the kit offers the installation team all they need to verify their duct. The use of air pressure and a darting solution, supporting ducts from 3-8 mm.

Product Information

The Hexatronic Duct Integrity Kit gives the installers the capability to clean, test and verify duct installation quality prior to fibre installation. Testing identifies any micro bends and pressure tests ensure complete system integrity.

Technical Information

Ordering Information

This kit includes the following:

- Durable, protective case
- Air test tool
- Air flow meter (8mm)
- 12 colour dart kit
- 8mm flexi hose
- 8mm Air Vent Kit
- Sponges
- 8/7/5/3mm Microducts
- Reducers Couplers
- End stops
- Straight couplers
