

Aluminium Strips – 120mm

120mm strips used for securing dropwire cables on telegraph poles

Features

- In packs of 25
- Suitable for securing various types of cables, particularly dropwire cables, on telegraph poles every 450mm
- Simple and straightforward installation process, saving you time and effort
- Used in conjunction with Nails Bonding and Washer Galvanised 19

Application

Used to secure cables to telegraph poles.

Pole hardware, PIA, PIA Hardware, Physical Infrastructure Access

Design

Our 120mm Aluminium Strips are versatile strips ideal for securing dropwire cables to telegraph poles every 450mm, providing reliable and durable cable management. Combine these aluminum strips with our Nails Bonding and Washer Galvanized 19 products, available separately.

Manufactured from 0.9mm BS1470 grade 51C material.

Vertical cables on the pole should be secured at intervals of at least 450mm and should not obstruct access to the climbing steps.
