

Cable End Cap

Brass End Caps for Micro Cables and Nanocables

Features

- Rounded tip that facilitates blowing of micro cables
- Extremely slim design
- Threaded for easy mounting
- Improves cable blowing performance
- Prevents cable damage
- Safe mounting on cable tip
- Re-useable

Application

Brass end caps shall be mounted on the cable end before blowing the micro cable into the micro duct. The end cap forms a rounded tip that facilitates blowing through duct joints. They also prevent air from penetrating through the open cable end into the cable. These end caps are extra slim to enable blowing into slim micro ducts. An inner thread makes them easy to mount on the cable tip. The end caps can be re-used.

Design

The end cap is manufactured from solid brass. The end is rounded and the inner hollow end is equipped with threads that keep the end cap firmly on the cable end.

Product Information

Material: Brass

Technical Information

Installation Notes

Warning!

Always ensure that the right size of cable end cap is used.

The end cap must be screwed down thoroughly.

Check that the end cap is firmly attached to the cable end.

When blowing cables, never look into an open duct end!

Ordering Information

End caps are delivered in packages of 10 pcs.
