

Safety Knife for Sheath Removal

Knife Suitable for Thick Walled Ducts

Features

- Rounded tip to avoid damage on ducts under sheath
- Double blade for forward and backwars cutting
- Good grip

Application

This knife is especially suitable for safe sheath removal on thick walled duct assemblies. The tip is rounded to avoid the blade cutting the microducts inside the assembly. It is also safe to use since the risk of accidentally cutting hands is minimized.

Technical Information

Installation Notes

Working with knives always requires special attention. Wear protective clothing such as cutting proof gloves and armored clothes. Avoid cutting in the direction of your hand, arm or other body parts.
