

Fiber Optic Jacket Slitting Tool

Sheath removal tool for Hexatronic Nano Cables and other jacketed fiber cables

Features

- Compact and easy to use jacket slitter
- Provides two jacket slits 180 degrees apart
- Factory set non-adjustable blade cassette for repeatable and exact cable preparation
- Suitable for Hexatronic Raptor nano cables

Application

The FOJST tool is a compact, one-step jacket slitter for PVC jacketed fiber cables. It is also perfect for certain nano cables and drop cables from Hexatronic, such as the Hexatronic Raptor nano cable. The tool will produce two jacket slits 180 degrees apart. The quality design provides reliable, nick-free slitting preparations. FOJST tool models are available in different dimensions, see article list. The slitting cassettes are identified by size and are made with indicator marks for achieving accurate prep lengths.

Installation Notes

- Ensure that you have the right tool for your cable before using it
- In case of doubt, please contact Hexatronic
- Insert the cable in the proper opening.
- Use the indicator marks to position the cable
- Close the tool and pull it off the cable for the desired dual slit
