

Warnnetze

Warning and Location Bands for Cable and Duct Installation

Funktionen

- Warning net with high quality tracer wire
- Stainless steel 0.8 mm wire
- Polymer structure that does not break easily if excavated
- Delivered with joints
- Halogen-free materials

Anwendung

Warning nets are used when installing ducts or optical cables. The net is normally placed approx. 30 cm above the duct system in the trench. An integrated tracer wire of high grade stainless steel is used to trace the duct system.

Each delivery length of 500 m is packed with three snap-fit wire connectors. A warning text is printed on the net (Swedish). For other languages, contact Hexatronic.

Produktinformation

Warning net: Polypropylene (PP)

Tracer wire: Acid proof stainless steel (EN X6 CrNi 1810)

Wire insulation: Polypropylene (PP)
