

Patch Handling Unit

Patch Storage, 19"

Features

- 2U for 19" standard width
- Fits metric mounting pattern
- Small depth, 185 mm
- Stores 24 x 6 m patch slack
- Front serviced
- Light weight

Application

The main application for this unit is to handle slack of patch cables connected between any fiber optic unit like transmission equipment, ODFs, splitter shelves etc.

Using a storage unit in a system enables the possibility to use a standardized length of patch cords rather than finding the optimized length for each individual case.

Design

The unit is divided in 24 compartments for vertical storage of the patch cords. Up to 6 m of slack can be stored in one compartment.

The mounting brackets fit both 19"-standard mount and metric (ETSI) mounting holes.

Product Information

The termination unit is made of painted Aluzinc sheet steel. All products are in accordance with RoHS.
