

C/O REHAU

# Identification Plate for Microducts or Cables

For marking customer connections, 7-20 mm

---

## Features

- Easy to mount on duct or cable end
- Large protected print label
- Integrated dirt-proof lid protects unused microtubes
- Suitable for customer address marking in distribution hub

## Application

The identification plate can be effortlessly slipped over the end of a duct or cable. A label containing essential installation information, such as customer address or customer number, can then be inserted into a transparent folder. The integrated cap enables a dirt proof sealing of unused microducts. Before the cable is blown in, you just cut the cap according to the pipe outer diameter and push it further down on the pipe.

## Product Information

Due to the raised position of the sign, it can be easily recognized even when the ducts are arranged in rows in fiber optic distributors. The duct in front of it does not obscure the lettering.

## Technical Information

**Product Color**

White
