

Anchoring Clamp

For figure-8 or Self Supporting Cables and Microducts

Features

- Heavy-duty, wedge clamp for aerial ducts and cables
- Easy installation
- Reduces the risk of injuries during emplacement

Application

The aerial duct support fittings are of the wedge clamp type and very easy to install. They are easily mounted to the duct assembly without any cutting or splitting. The fitting is very gentle to the ducts due to the length and shape of the wedge and provides for quick and easy installation.

Design

Designed for ducts with a Fiber Reinforced Plastic (FRP) messenger figure-8 shaped duct assembly or self supporting drop ducts.

The design of clamp reduces the risk of injuries during installation and installation time is minimized. The time usually spent preparing the duct-assemblies can be saved and the use of knives, strippers and other tools is no longer required. Since no cutting tools are required to secure the duct-assemblies aloft, there is an enormous reduction to the risk of injury to the lineman. Enabling huge savings in installation time, training time, products and maintenance.

Product Information

Body: UV protected thermoplastic

Wedges: UV protected thermoplastic

Bail: Stainless steel
