

## Catcher Kit for Blown Fibre Installations

### Application

The Hexatronic calibration dart receiver (catcher) is deployed during the calibration of the duct integrity. With the pressure gun attached to the compressor and air hose of the microduct under test. The kit is optimised to suit microduct installations and contains a blown fibre inflator with air flow gauge for measuring the microduct integrity and identification of air leaks.

A heavy duty catcher for use on blown fibre installations to catch calibrator pellets and cleaning sponges.

### Design

The calibrator test confirms the minimum internal dimensions along the microduct route. The dart is designed to be halted should it be subjected to bad couplers, crushed duct and tight bend radius.

The 10mm adaptor can be adapted to fit other tube diameters, by use of the reducing adaptors. The adaptor should be used in conjunction with the supplied end caps.

### Features

- Kits include:
- 10mm Endstop
- Reducing coupler 10mm - 7mm
- Polycarbonate tube 10mm OD x 7mm ID clear x 100mm long
